• He really cares about his students.

• I really appreciate how he stresses the importance of understanding the concepts over just solving the problems.

• Wonderful teacher! Smart, interesting, funny. Showed a lot of concern for student understanding of material. Very clear lectures. One of the best math professors I had so far!

• not bad

• Dr. Mantilla-Soler is a very helpful and fair professor. He did an excellent job in making the material easy to grasp and was extremely patient with all of my questions. When I would email him, he would always respond with a very detailed answer, helping me understand everything that I found confusing and it is obvious that he spent much time composing his response. The point that I’m trying to make is that I do not feel he brushes my questions or myself away at all. In class, I appreciated his teaching style. He always finds a way to ask students questions on the concepts, and thus makes the learning very interactive. Dr. Mantilla-Soler definitely shows interest in the learning of his students. He always asks what we don’t understand, what we would like for him to reiterate if we missed a point, how we found the exams, what we did and didn’t like about the questions, and tells us how we can prepare for the exams. All in all, Dr. Mantilla-Soler has shown me the beauties of mathematics and why math is worth pursuing. This has been my favorite and best class at UBC so far.

• maybe do more examples instead of focusing on the theorems The number and types of problems/assessments was good - quizzes and webwork assignments made me keep up with the

• material, and suggested problems for the textbook were good practice. I also thought that the classes had a good combination of examples and explanations.

• He made us to quizzes so that we would catch up with the material which i found was very effective. He was an effective teacher because he conveyed the material very clearly and really pinpointed the main concepts needed to be learned.

• Professor Mantilla did a superb job.

• I really like the use of webwork (online homework) as well as recommended textbook problems

• Very understanding and focused more on the concepts rather than manual calculation on midterms and the final which i found to be very fair.

• It’s nice that he tries to get a bit of class discussion going which is quite helpful to understanding math concepts.
• The instructor was approachable. He was willing to help if you had any questions.
• I very much appreciated how this instructor was personable and got to know students names.
• Tests were fair, and he explained well on the course materials
• I wish he would be more lenient marker; he was not generous for partial marks. However, he was very helping and encouraging teacher. Quizzes every week was a good idea for students to keep up with materials.
• Absolutely amazing math professor. Not only he explains the theories very well, but also does he inspire interest in this course. Definitely a 10/10 professor.
• He was a great instructor and it was a pleasure learning from him.
